T = % Transmitted : R = % Reflected : S-C = Shading Co-efficient. Shading Co-efficients are expressed as a decimal between 0 and 1. The lower the figure, the higher the shading efficiency of the blind.

This data is based on:

Tests conducted using double glazed 6mm float glass with 12mm air space. Blinds are fully closed.

Shading Co-efficients are calculated for radiation at normal incidence. Standard U value is 2.75 W/M²K = 0.49Btu/ft²h°F.

Important: Performance data has been compiled with great care using the latest techniques. However, it is advisable to check actual suitability of fabrics for a particular application before use.

In line with our commitment to product development, specifications may be subject to change without notice.
